## Bi-Weekly Pool Customers Off-Week Pool Care

Below are Lilly Pool and Spa Service's recommendations for **How to Care for your Pool During the Off-Week** (non-service week). These recommendations should help keep your pool in good condition until your next bi-weekly service.

### 1. Test Your Pool Water:

- ✓ Regularly test your pool water to ensure it remains balanced and safe for swimming. Alternatively, bring a sample of your pool water to our store for a free water test. Our team will analyze the sample using advanced digital testing equipment and provide personalized recommendations for maintaining optimal water quality.

### 2. Pool Maintenance:

- ✓ Brush your pool's walls and floor
- ✓ Empty skimmer and pump baskets

### 3. Then add the following chemicals:

#### Chlorine Pools:

- ✓ Add 8 oz. of Algaecide
- ✓ Add 8 oz. of Stain & Scale (Iron Out)
- ✓ Add 4 capfuls of Phosfree Extra Strength
- ✓ Add 1 scoop of Shock & Swim to maintain water clarity and sanitation
- ✓ Add liquid chlorine to your pool or add chlorine tablets to your floater
  - Pour Liquid Chlorine evenly across the surface of your pool while the pump is running to ensure even distribution.
  - Place the recommended number of Chlorine Tablets into a floater and let it drift in the pool. The floater will gradually dissolve the tablets, releasing chlorine into the water over time.

#### Saltwater Pools:

- ✓ Add 4 capfuls of Scale-Free
- ✓ Add 8 oz. of Algaecide
- ✓ Add 8 oz. of Stain & Scale (Iron Out)
- ✓ Add 4 capfuls of Phosfree Extra Strength
- ✓ Add pool salt if levels are low

### 4. Filter Run Time:

- ✓ Run your pool pump for at least 12 hours per day

---

#### Additional Information:

- All chemicals listed above will be delivered to your property at the start of service.
- We will supply additional chemicals to your property on an as-needed basis. Please note that additional chemicals are billable.
- Should you require service during your off week, an additional service fee will be applied.
