

Solar-Powered Robotic Pool Skimmer

Pairing Betta with a New Remote

Pairing Betta with a New Remote

The remote control packed with Betta has been paired in the factory. You only need to do this step if it doesn't work, or you replaced it with a new one.

First, slide the power to "OFF" position to turn off the unit. Second, slide the switch to "ON" to turn it on. Press any button once on the remote control within 5 seconds after you turn on the unit. Test the buttons on the remote after the 5 seconds and see if the unit is moving accordingly. If yes, the pairing is complete. If not, repeat this process from the beginning. If you have no success on pairing, please contact Betta customer service.

Using Remote Control

You should be able to use the remote control out of the box since it's paired with your Betta in the factory. You only need to pair it if it doesn't work, or you replaced either the Betta unit or the remote control.

Press any button on the remote control. Betta will instantly enter Remote Control Mode. Press and hold the left button to move Betta left, press and hold the right button to move Betta right, so on and so forth.

To go back to Auto Mode, press the middle button down for 2 seconds, and Betta will go back to Auto. Also, if you do not operate Betta with the remote control for 2 minutes, it will go back to Auto Mode by itself.
